

SKB TR-14-08

Handling of future human actions in the safety assessment SR-PSU

In the earlier distributed report, there are errors that now have been corrected. The changes are listed in the table below. An updated pdf version of the report, with the table printed on the back of the title page, can be found at www.skb.se/publications.

Page 41, paragraph 2 and 3	This is in line with the general guidelines to the regulations SSMFS 2008:37 (SSM 2008b), where it is stated that: <i>"A number of scenarios for inadvertent human impact on the repository should be presented. The scenarios should include a case of direct intrusion in connection with drilling in the repository...."</i> , <i>"....a set of stylised scenarios. i.e. it is impossible to foresee all future human actions."</i>	This is in line with international recommendations and the general guidelines to the regulations SSMFS 2008:37 (SSM 2008b). SSMFS 2008:37 states that: <i>"A number of future scenarios for inadvertent human impact on the repository should be presented. The scenarios should include a case of direct intrusion in connection with drilling in the repository...."</i> IAEA, ICRP and NEA have all recommended that one or more stylised scenarios be developed to demonstrate the robustness of the disposal system rather than speculating about all types of inadvertent intrusion that could possibly occur and e.g. ICRP Publication 81 (ICRP 1998) states: <i>"Because the occurrence of human intrusion cannot be totally ruled out, the consequences of one or more typical plausible stylised intrusion scenarios should be considered by the decision-maker to evaluate the resilience of the repository to potential intrusion."</i>
